

AdminDroid 365: One-Stop Solution for Microsoft 365 and Active Directory Management

Bring your entire Microsoft 365 and Active Directory environments under one powerful management platform.

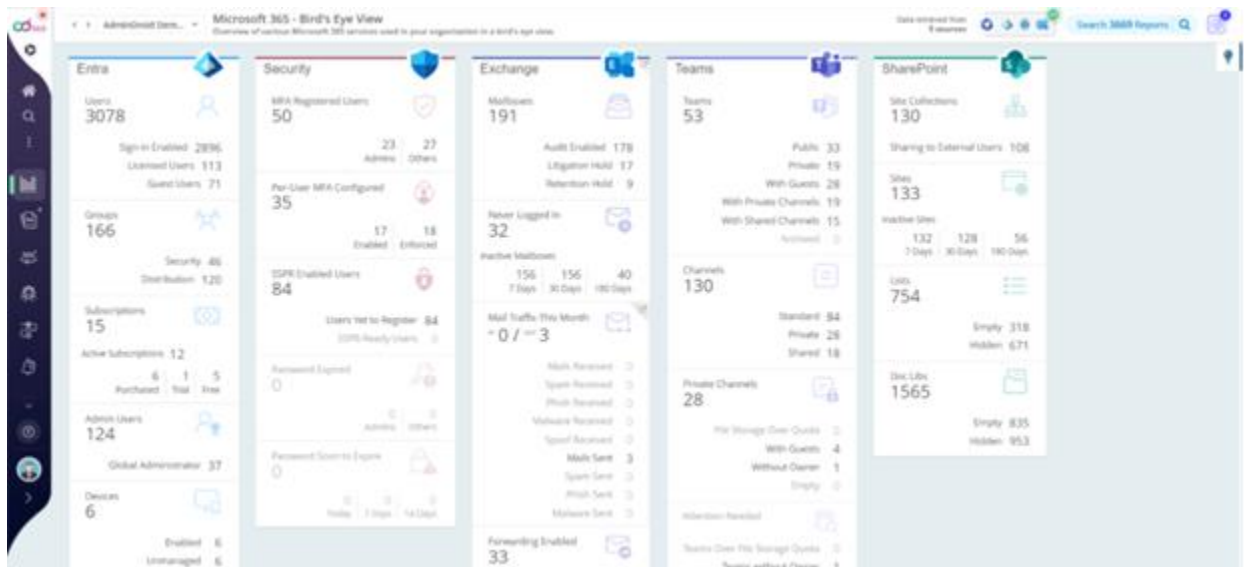

With 3000+ Microsoft 365 reports, 450+ Active Directory reports, and 60+ intuitive dashboards, AdminDroid 365 lets you monitor, manage, and secure your organization with unmatched clarity and control.

From in-depth analytics to smart automation, AdminDroid 365 delivers everything you need for efficient administration, proactive monitoring, and compliance assurance - all in a single solution.

Microsoft 365 Reporting & Auditing – Complete visibility across your cloud

Access detailed insights across **Exchange Online, SharePoint, Teams, OneDrive, Power BI**, and more. Track usage trends, identify issues early, and make faster, data-driven decisions with AdminDroid 365.

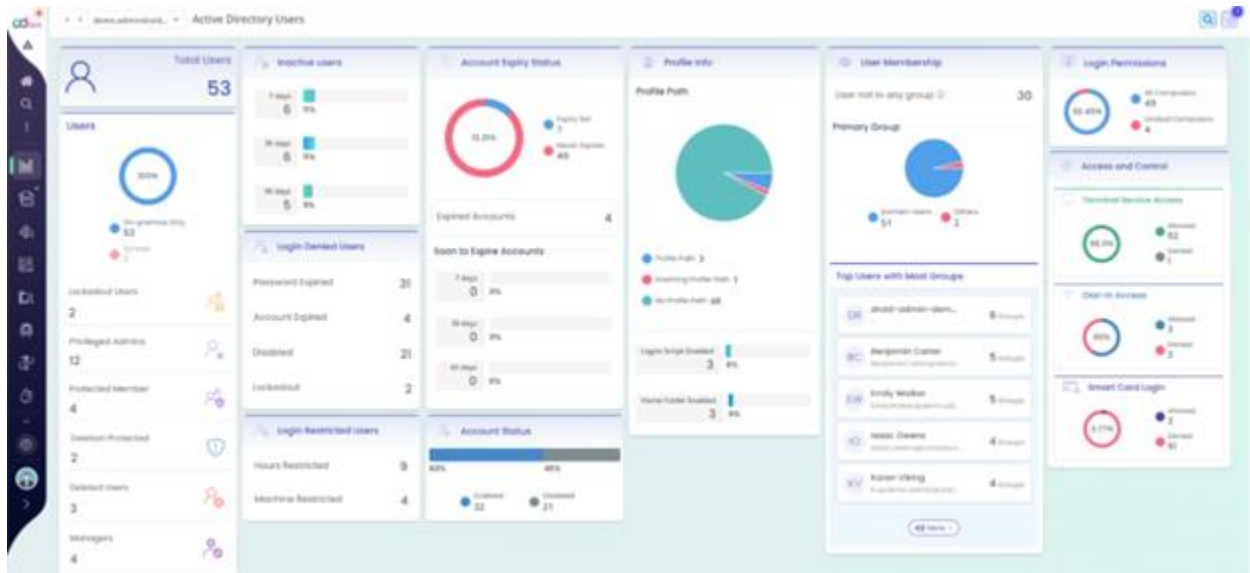

Monitor every user and group activity - from file sharing and email traffic to password changes and login attempts. Reports are intelligently categorized by service, giving you granular visibility into every aspect of your Microsoft 365 ecosystem.

Active Directory Management – End-to-end control across your AD environment

Gain comprehensive reports for visibility into **Users, Groups, Computers, Printers, Contacts, Organizational Units, GPOs, and Security settings.**

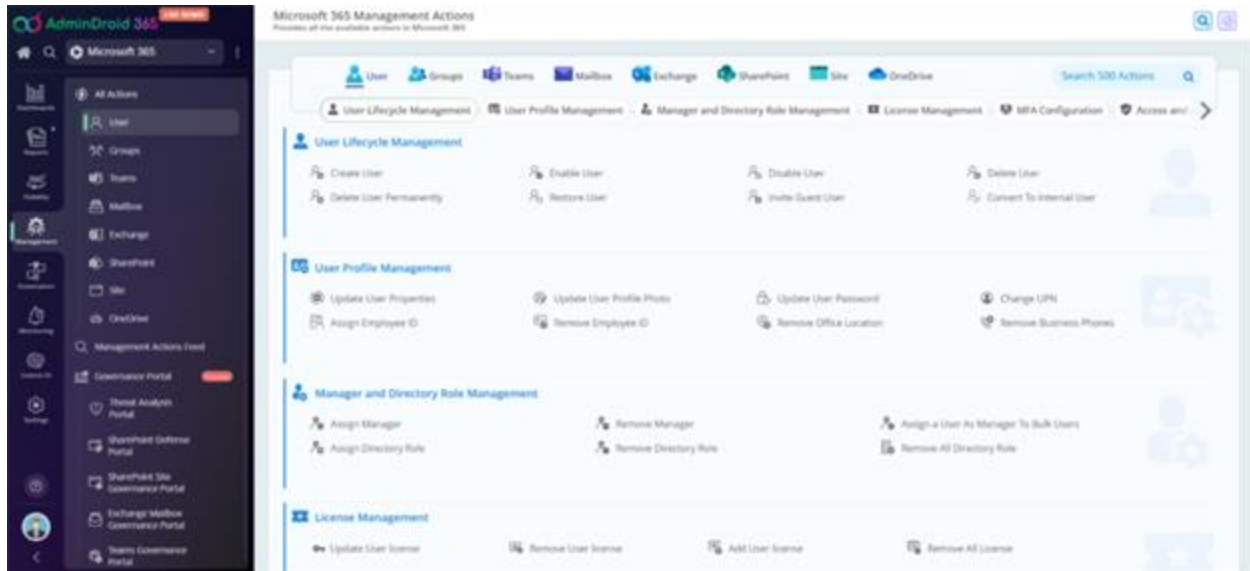

Track logins, policy changes, and activity across servers and workstations in real time. Reports are neatly structured by AD components, enabling IT teams to maintain performance, security, and compliance with ease.

Management Actions – One console for all your admin tasks

AdminDroid 365 empowers administrators to execute **475+ management actions across Microsoft 365 and Active Directory** – including creating, modifying, or removing users, computers, mailboxes, groups, Teams, SharePoint sites, and OneDrive accounts.

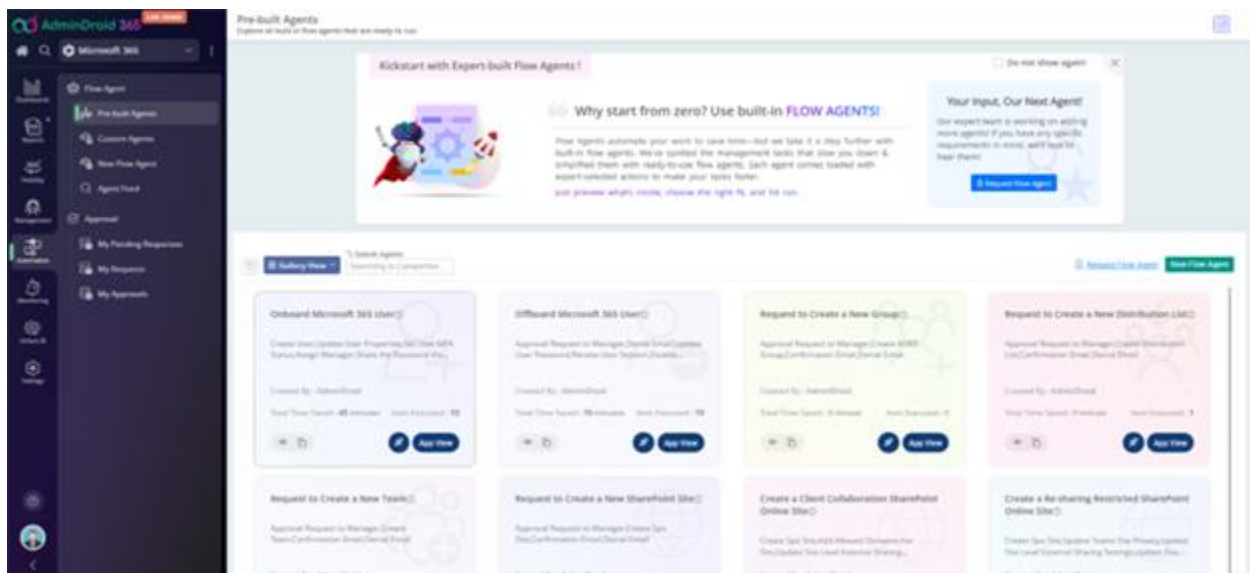

Handle **bulk updates** with ease, **pause or resume** operations anytime, and **delegate actions** securely with granular access control.

Automation – Save time with no-code flow agents

AdminDroid Automation Agents streamlines everyday administrative tasks such as user onboarding, offboarding, and updates, through a centralized, no-code interface.

Build workflows with simple drag-and-drop actions — supporting reusable templates, approvals, and detailed execution logs for complete traceability.

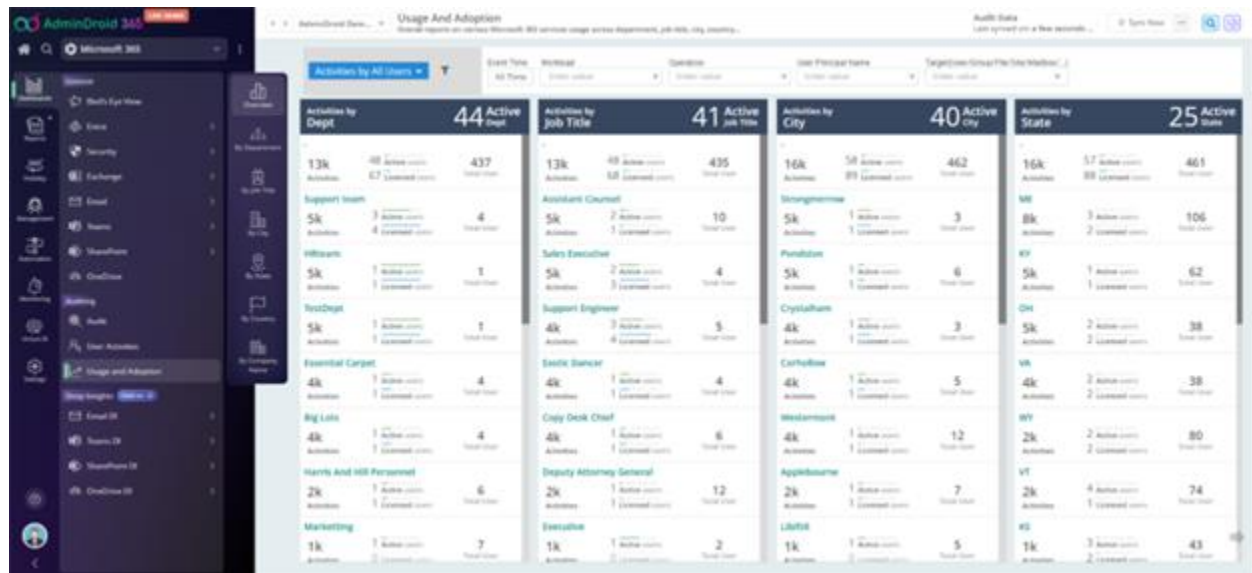

Microsoft 365 Usage Analytics – Understand and optimize user adoption

Easily audit and evaluate service usage and adoption through the **Usage & Adoption Dashboard**.

Identify **active users by department, job title, location, or workload**, and analyze their activities such as file access, sharing, and collaboration patterns.

Also, this assists administrators in **identifying inactive resources** and removing unused licenses, hence lowering the cost that is spent on licenses.

AdminDroid offers **up-to-date** analytical reports on internal vs. external email statistics, Azure sign-ins, Conditional Access policy analytics, and more, providing insights not readily available in native Microsoft 365.

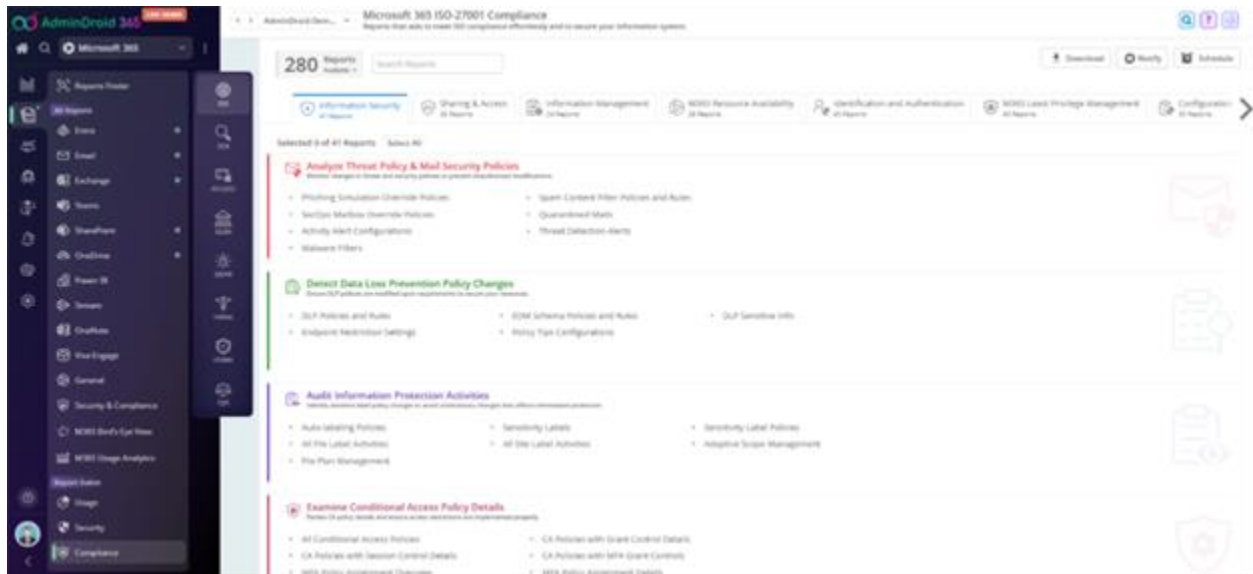

Microsoft 365 Compliance Auditing – Strengthen data security & meet standards

To simplify your organization's compliance requirements, reports are pre-mapped with respect to various compliance requirements.

- ISO
- SOX
- PCI-DSS
- GLBA
- GDPR
- HIPAA
- FISMA
- CJIS

This will help Microsoft 365 administrators in **maintaining internal control over the organization's data securely** by monitoring suspicious activities, alerts, threats, unauthorized accesses, configuration & privilege changes, etc.

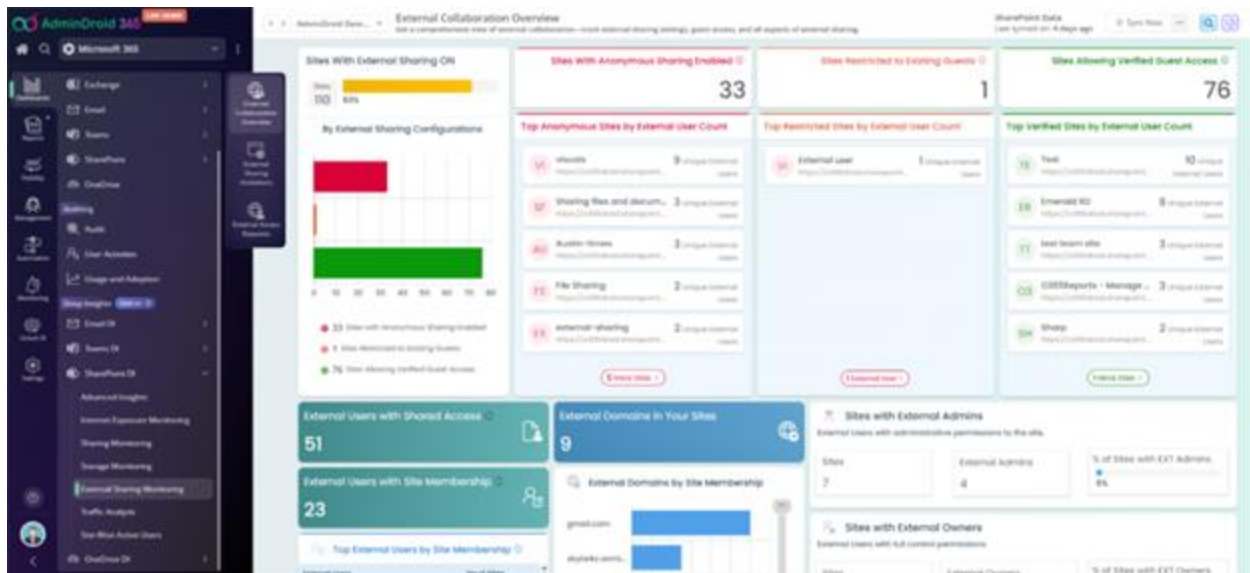

Microsoft 365 Deep Insights – Dive deeper into your M365 ecosystem

Go beyond surface-level reports with detailed analytics on activity, adoption, and growth.

- **Mailbox Deep Insights:** Analyze detailed mailbox usage and permissions for better management.
- **Email Deep Insights:** Track traffic patterns, attachments, links, and domain interactions for full transparency.
- **Teams Deep Insights:** Measure employee engagement via chat, calls, meetings, and monitor user availability statuses.
- **SharePoint Deep Insights:** Monitor site content, permissions, storage, and external sharing activities.
- **OneDrive Deep Insights:** Review users' Drives, files, permissions, and storage usage patterns.

Get a unified, actionable overview of your Microsoft 365 environment to manage resources proactively.

Alerting – Detect risks before they escalate

AdminDroid helps you stay proactive by automatically identifying risks, anomalies, and unusual activities across both Microsoft 365 and Active Directory. With coverage for over **3000 activities and 110+ prebuilt policy templates**, you can **deploy intelligent alerts in minutes**.

Visualize alert trends and statuses in the Alerts Dashboard and take immediate action on suspicious behavior. Classify alerts as Open, Closed, or Investigating - ensuring nothing slips through the cracks.

Alert Policies
Overview of all the configured alert policies

Reminders & Follow-ups – Automate notifications and stay on track

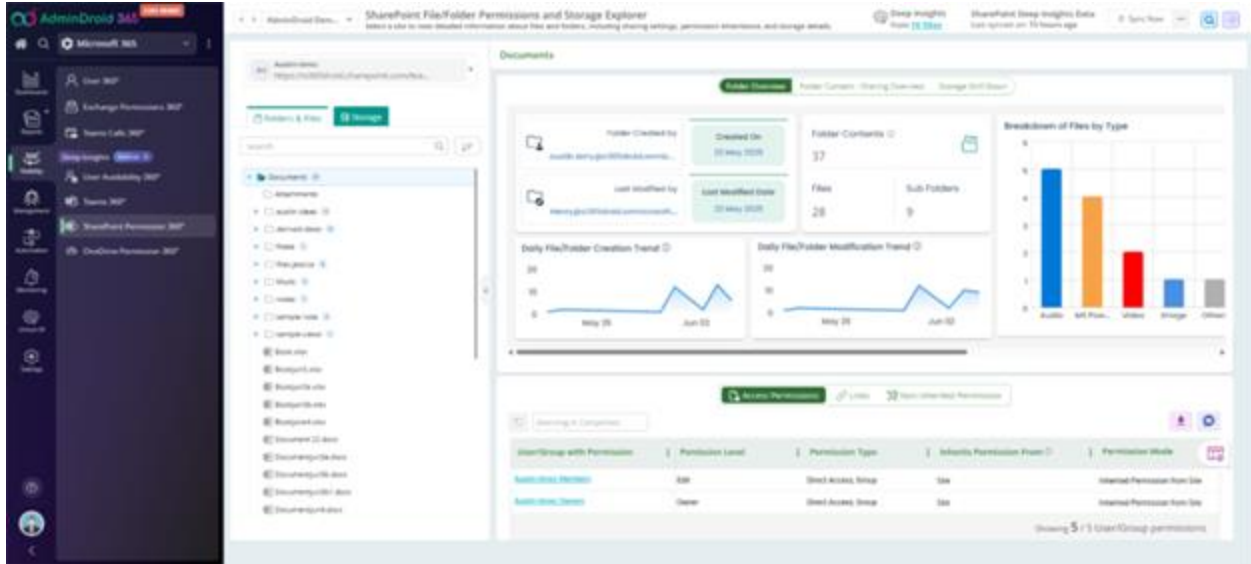

Automate **timely reminders and follow-ups** for every critical action within your Microsoft 365 and Active Directory environment.

From notifying users about **upcoming account and password expirations to monitoring lockouts and sending Kerberos password reset alerts**, AdminDroid handles all follow-ups for you. This ensures that no task is missed, delayed, or overlooked.

360° Visibility Explorers – Unified view of your Microsoft environment

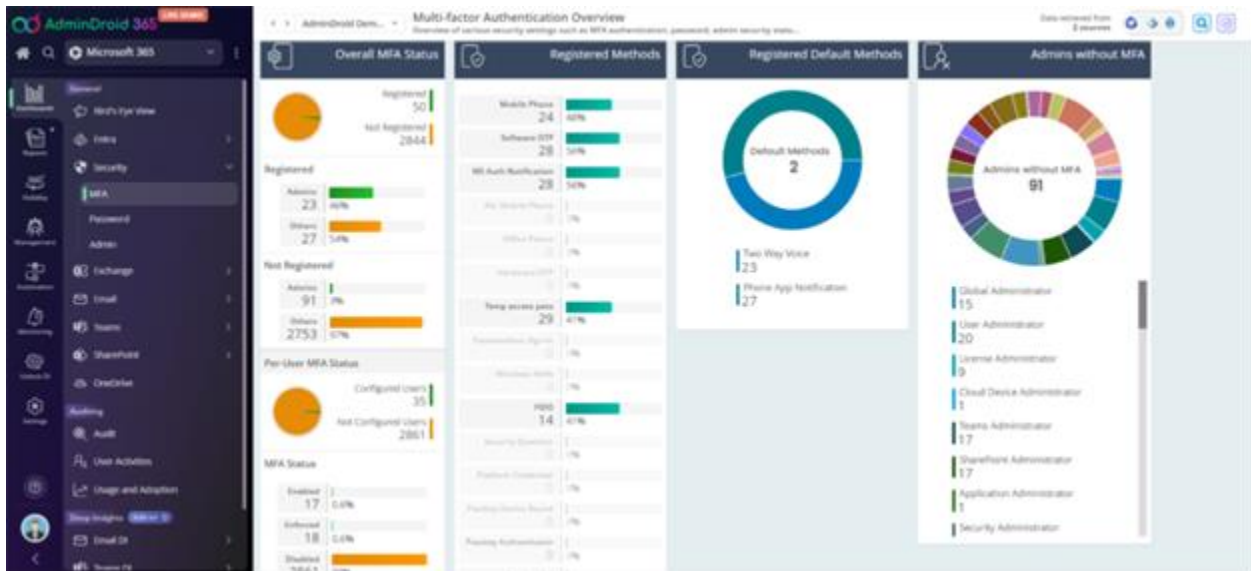

Experience a complete, interconnected view of your entire Microsoft 365 ecosystem with 360° Visibility Explorers. Easily track user activities, monitor mailbox accesses, and analyze Teams collaboration patterns – all in one place. Visualize SharePoint and OneDrive file permissions in an intuitive tree view for smarter and faster administration.

Microsoft 365 Graphical Insights – See the big picture instantly

AdminDroid provides insightful dashboards by allowing admins to get **clear visibility with a bird's eye perspective** of various Microsoft 365 services' statistical data.

Each report includes charts and graphs (Pie, Donut, Bar) for quick comprehension. Drill down into any metric to explore underlying data and uncover actionable insights.

Major feature highlights:

Multi-tenant Support - Connect multiple Microsoft 365 tenants and generate reports for all of them within a single AdminDroid portal. Also, managing multiple domains within a Microsoft tenant is now easier, enabling you to consolidate reporting and oversight across all connected domains.

Multi-domain Support – AdminDroid lets you oversee multiple Active Directory domains seamlessly, providing comprehensive reporting across all domains.

Partner Support - Leverage your GDAP permissions to onboard multiple customer tenants using your Microsoft Partner account.

Rebranding - You can personalize your AdminDroid portal appearance with your company name, logo, and sign-in page to create a seamless experience.

Virtual Tenants - Gain precise control over user access to Active Directory and Microsoft 365 resources within AdminDroid by using Virtual Tenants.

Delegated Access - Limit the reports and dashboards access to your AdminDroid admins. You can also control which Active Directory and Microsoft 365 data are to be delegated in those reports and dashboards. This delegated access can be granted to any user, regardless of their Microsoft 365 role.

Governance Portal - Transform the way you manage Microsoft 365 with intelligent governance portals delivering complete security, compliance, and usage visibility across Teams, SharePoint, and Exchange. Instantly view insights, make informed decisions, and act - all within a single interface.

Intelligent Scheduling - Send automated reports to the desired email addresses at regular intervals to keep track of the organization's and users' daily/weekly/monthly progress. Also, it is possible to schedule reports with applied filters, preferred report columns, and more customizations, according to your reporting needs.

Multi-Geo Support for SharePoint Data - You can seamlessly manage your SharePoint sites, site collections, lists, document libraries, and all such data across different geographical locations.

Data Retention - Override the default 180 days limit of native audit log retention and preserve the audit data indefinitely.

Database Backup & Restore - Ensure your critical data is protected with scheduled backups and reliable restore options.
